Professional Summary

B.Tech AI/ML student at VIT with hands-on experience in Python, Machine Learning, full-stack development, and cloud-based AI solutions. Proficient in building production-grade async backends, explainable ML pipelines, and generative AI integrations. Seeking internships in ML and backend engineering.

Experience

Android Development Intern

Jun 2026 – Present

Pincode*web* Technology

Remote

- Developing and testing Android applications using Android SDK, Kotlin, and Git.
- Handling API integration, debugging, and performance optimization across app modules.

Web Developer Intern

May 2026

InAmigos Foundation (IAF)

Remote

- Built and maintained web features with AI/ML integrations; followed collaborative development workflows.

Tech Member – GDSC, VIT Chennai

Aug 2024 – Aug 2025

Vellore Institute of Technology

Chennai, India

- Organized technical workshops; completed a GenAI program on LLMs and prompt engineering.
- Built projects using Gemini API and Streamlit; drove student engagement and outreach.

Technical Skills

Programming: Python, Java, TypeScript, JavaScript, SQL, C, C++

AI/ML: Machine Learning, Generative AI, Prompt Engineering, TensorFlow, Scikit-Learn, XGBoost, LightGBM

Backend & APIs: FastAPI, Flask, Spring Boot, Node.js, Express.js, REST APIs, JWT Authentication, Microservices

Frontend & Mobile: React.js, React Native, Next.js, TailwindCSS, Expo SDK

Data & Visualization: Streamlit, Plotly, BigQuery, Pandas, NumPy, Matplotlib, Seaborn

Databases & ORM: PostgreSQL, SQLite, MongoDB, Prisma ORM, SQLAlchemy

Cloud & Tools: GCP (Cloud Functions, App Engine, Pub/Sub), Docker, Git, Postman

Projects

Closira Backend – AI Enquiry Handling Pipeline | Python, FastAPI, SQLAlchemy, Pydantic

2025

- Built a production-style async backend using FastAPI and SQLAlchemy ORM with SOP matching, auto-escalation, and follow-up scheduling across 5 REST endpoints.
- Designed modular architecture with BackgroundTasks processing, structured JSON logging, and full Swagger documentation.
- Implemented Pydantic request validation, proper HTTP status codes, and escalation logic for unmatched enquiries.

TruthLens – Fake News Detector with SHAP | Python, Flask, scikit-learn, SHAP, XGBoost

2025

- Built an explainable fake news detection system using TF-IDF and ensemble ML models trained on 15,000+ news samples.
- Achieved 90% accuracy using Random Forest, XGBoost, LightGBM, and Logistic Regression models.
- Developed a Flask REST API with SHAP-based feature explanations, trust scoring, and URL-based news classification.

Toxic Comment Classification | Python, Flask, GloVe, GRU, TensorFlow

2025

- Built a multi-label NLP system classifying comments into 6 toxicity categories using GloVe embeddings and a GRU network trained on 383,000+ comments.
- Achieved 98–99% validation accuracy with a full preprocessing pipeline; deployed as a Flask web app.

AI-Powered Research Assistant Extension | Java, Spring Boot, Gemini API, Chrome Extension

2025

- Developed a Chrome Extension with Spring Boot backend integrating Gemini API for code debugging, summarization, and automated test case generation.
- Implemented article summarization and REST-based backend communication for real-time content analysis.

Education

Vellore Institute of Technology (VIT)

2023 – 2027

B. Tech in Artificial Intelligence and Machine Learning; CGPA: 8.75

Vellore, India

Pragati Public School

2022

Senior Secondary (CBSE); Percentage: 93.8%

New Delhi, India

Holy Mission School, Darbhanga

2020

10th Grade (CBSE); Percentage: 94.8%

Darbhanga, Bihar

Certifications

Google — GenAI Apps with Gemini and Streamlit (2024)

Google — Cloud Vision API (2024)

Google — Prompt Design in Vertex AI (2024)

IBM — Blockchain Essentials (2025)
